Estimation with boosted sample size (n+300)

Felix Schönbrodt

Tue Nov 29 15:29:35 2016

```r
library(ggplot2)
library(dplyr)

load("summ.boost.RData")
```

```r
# Show estimate

# remove selProp = 0 (unrealistic; show in Appendix)
summ2 <- summ %>% filter(
    !method %in% c("PET.lm", "PEESE.lm", "pcurve.evidence", "pcurve.lack")
    )
```

Estimate and 95% bootstrap percentiles (for selProp = 60% and tau=0.2)
